Project Title: Library Management System

(Basic HTML, Hyperlink and CSS , js)

1. **JS Validation: (minimum 5(any 5 logic) screenshot of JS Validation with source code) (Registration Page both client and admin side)**

====LOGIN VALIDATIONS =======

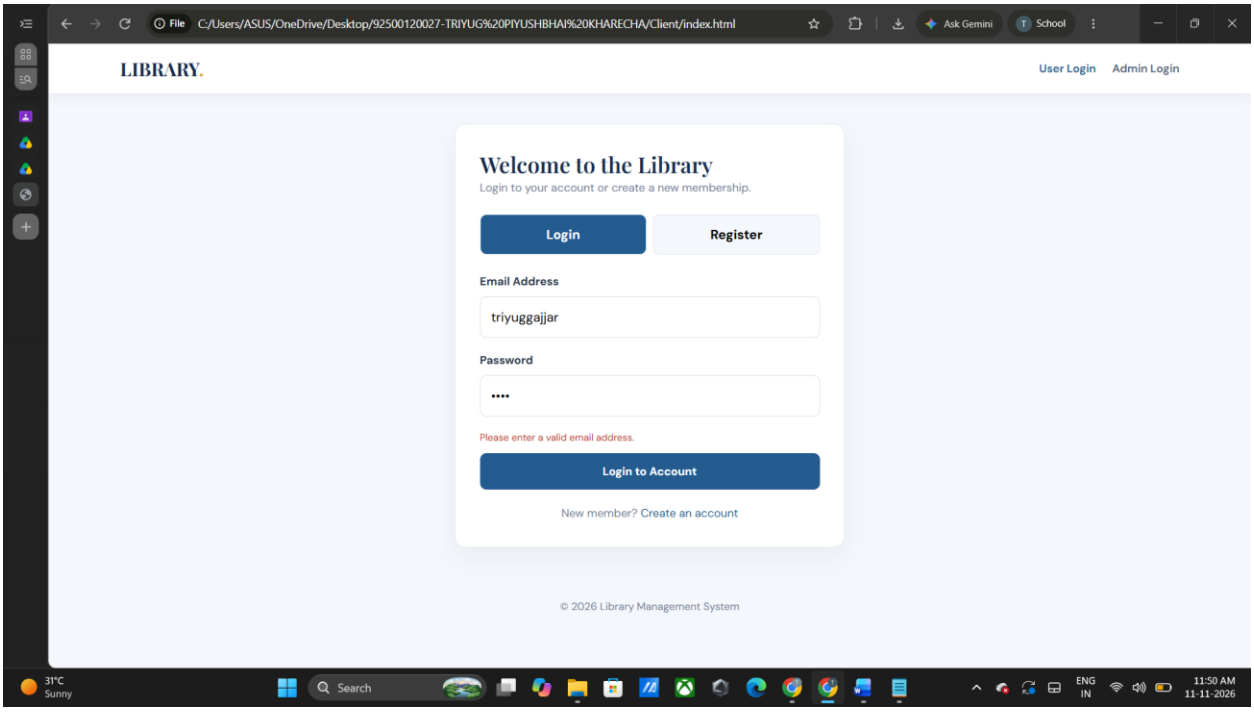

Fig 1 login email validation

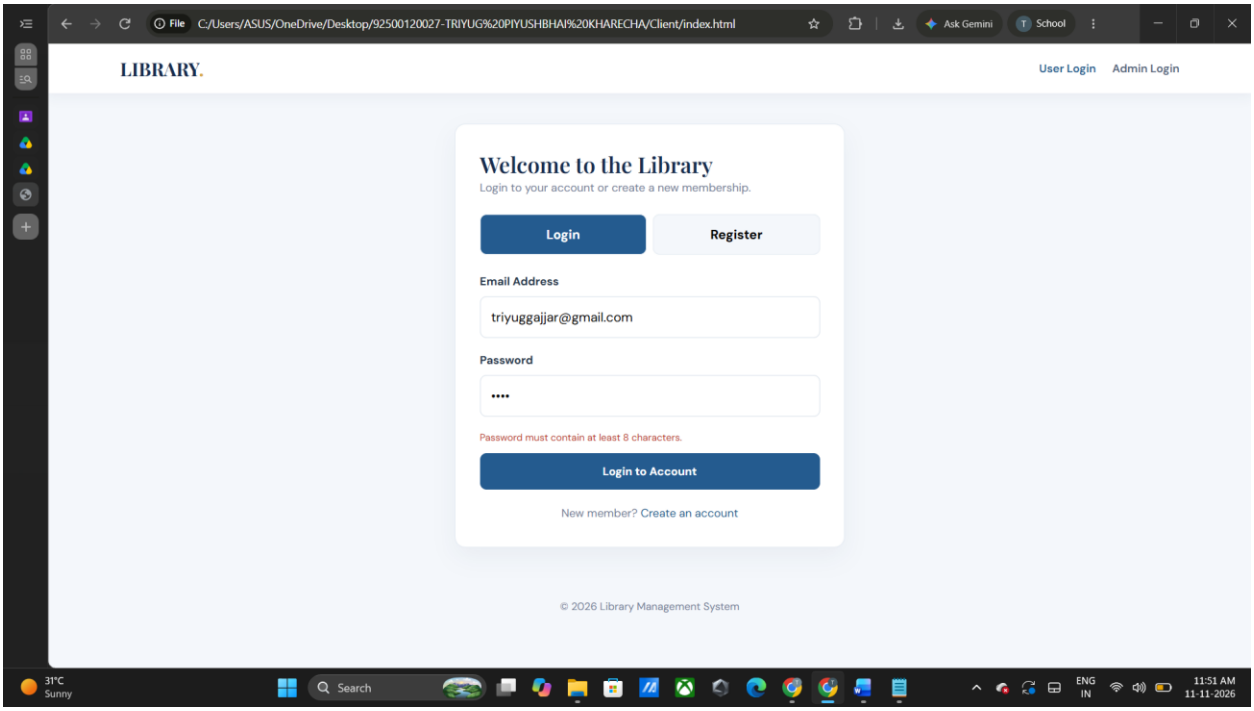

Fig .2 login password character size validation

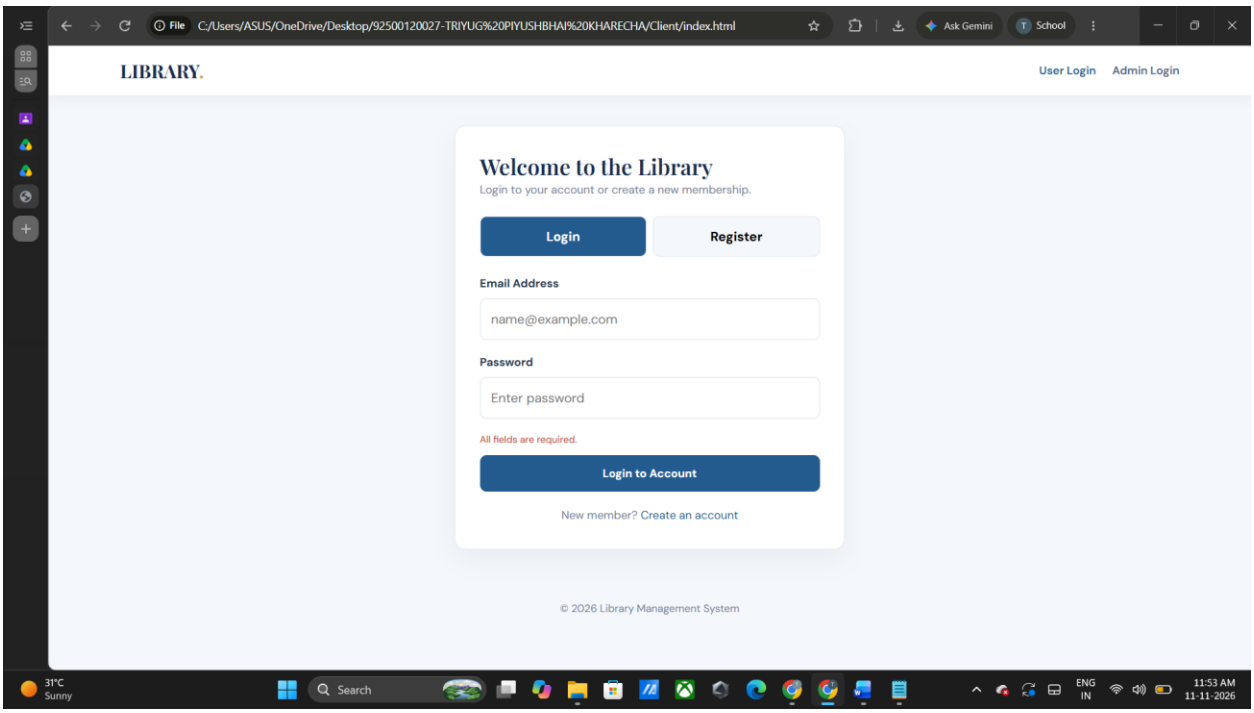

Fig 3 login all field required

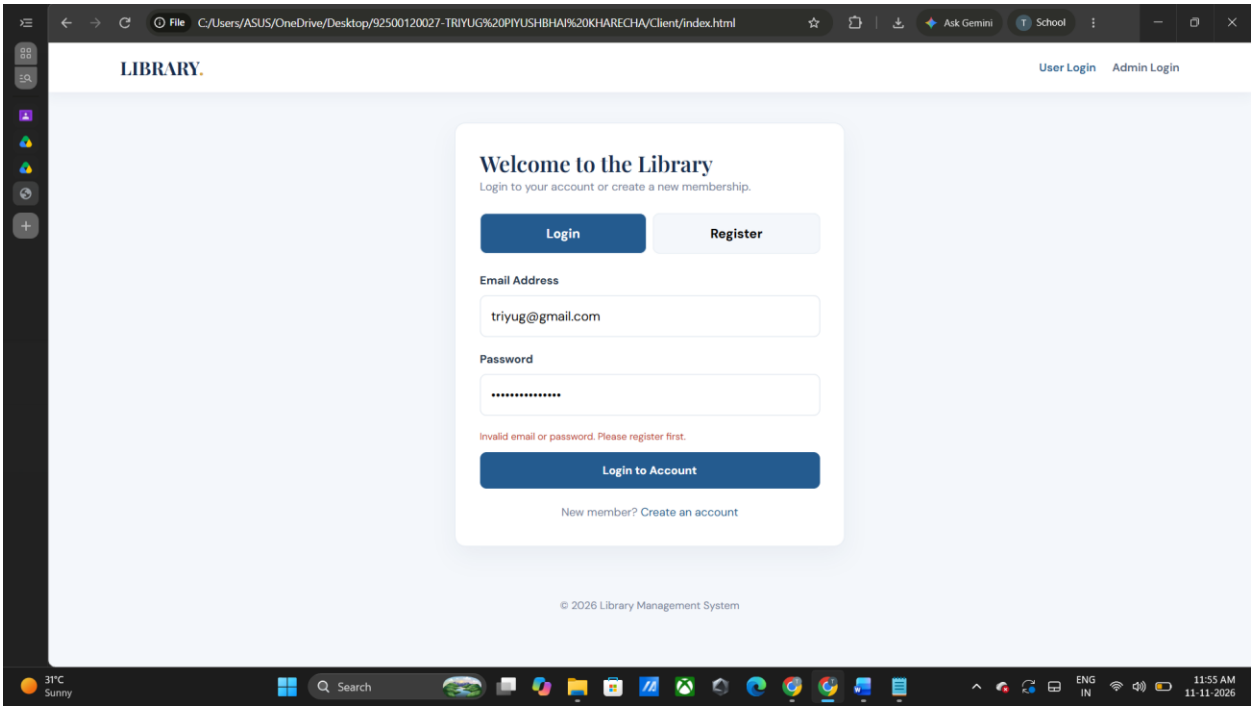

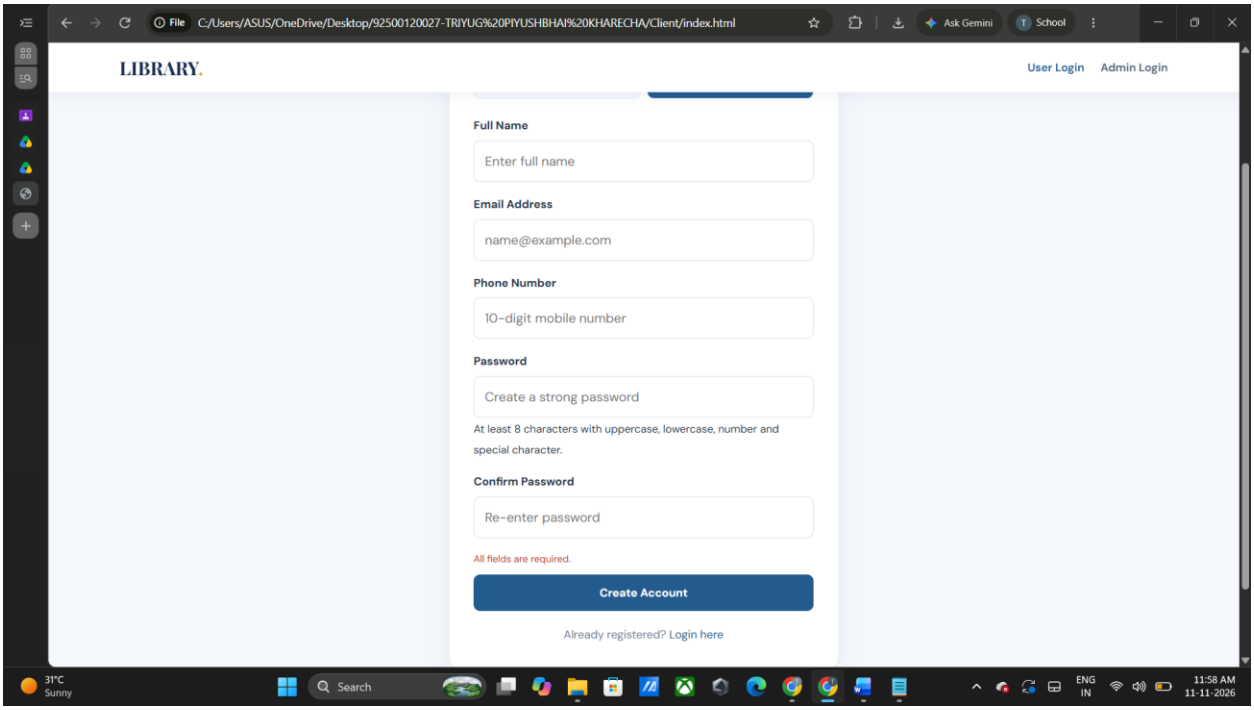

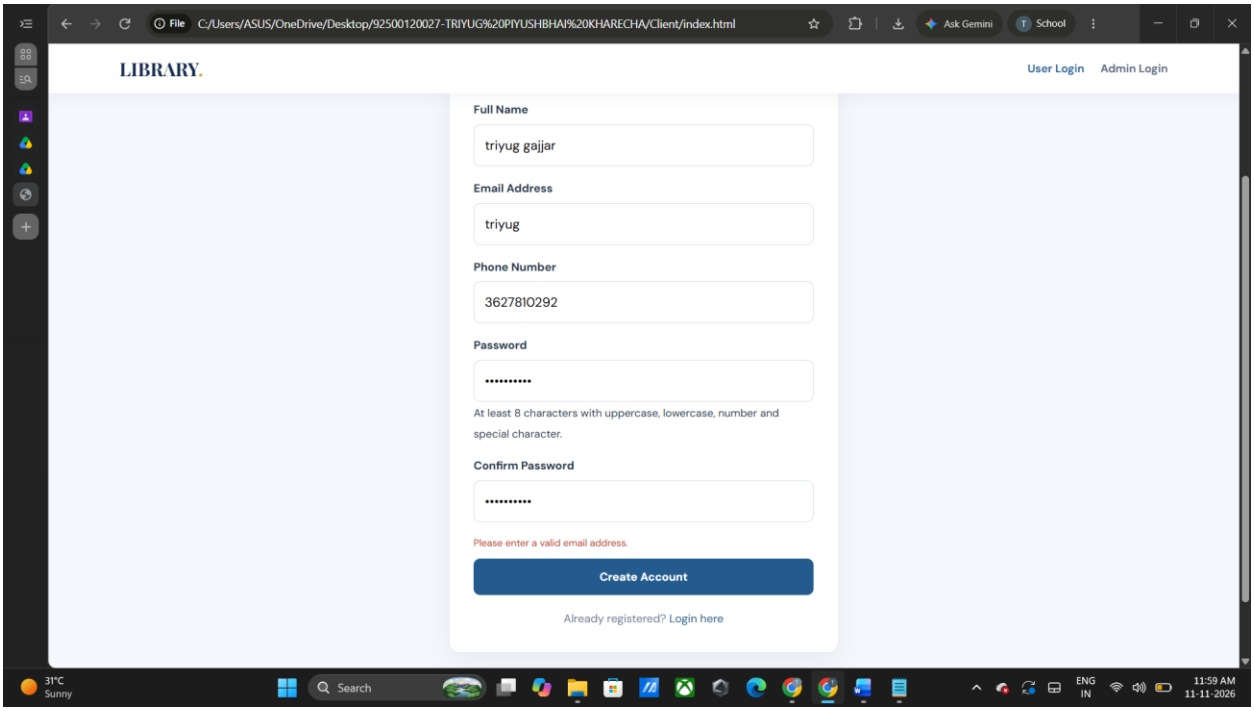

Fig 4 without reg. login validation

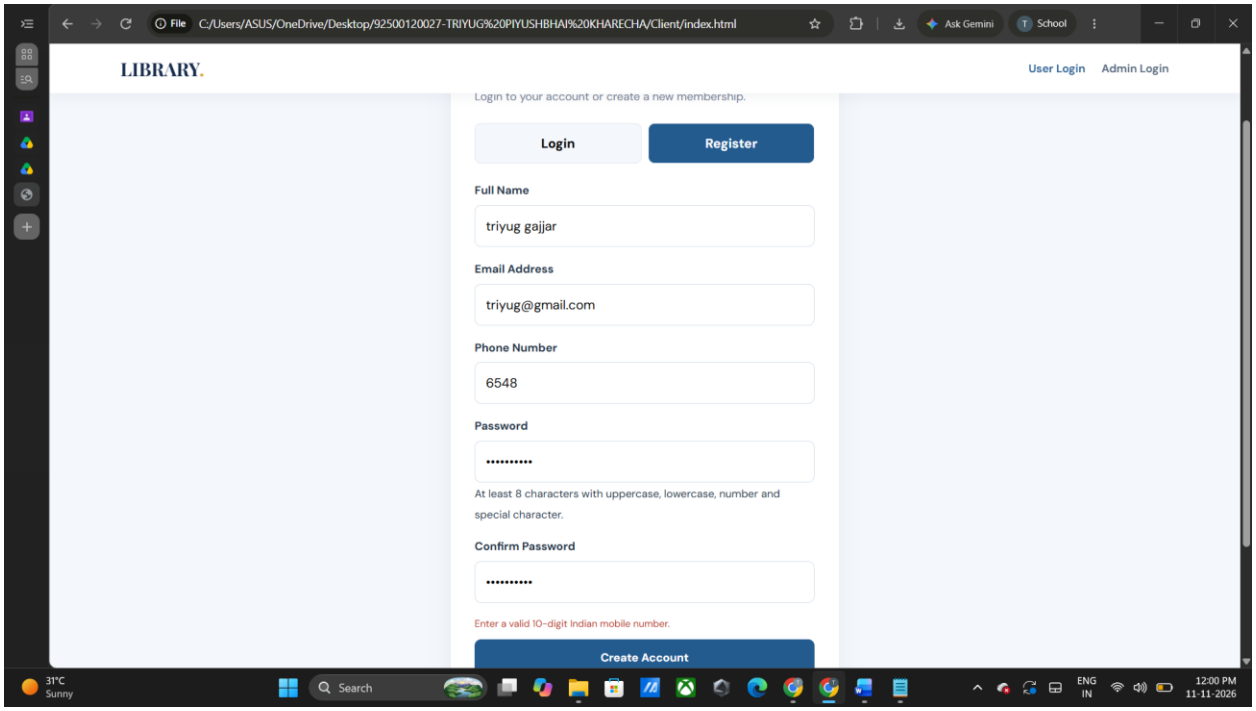

========registration validation============

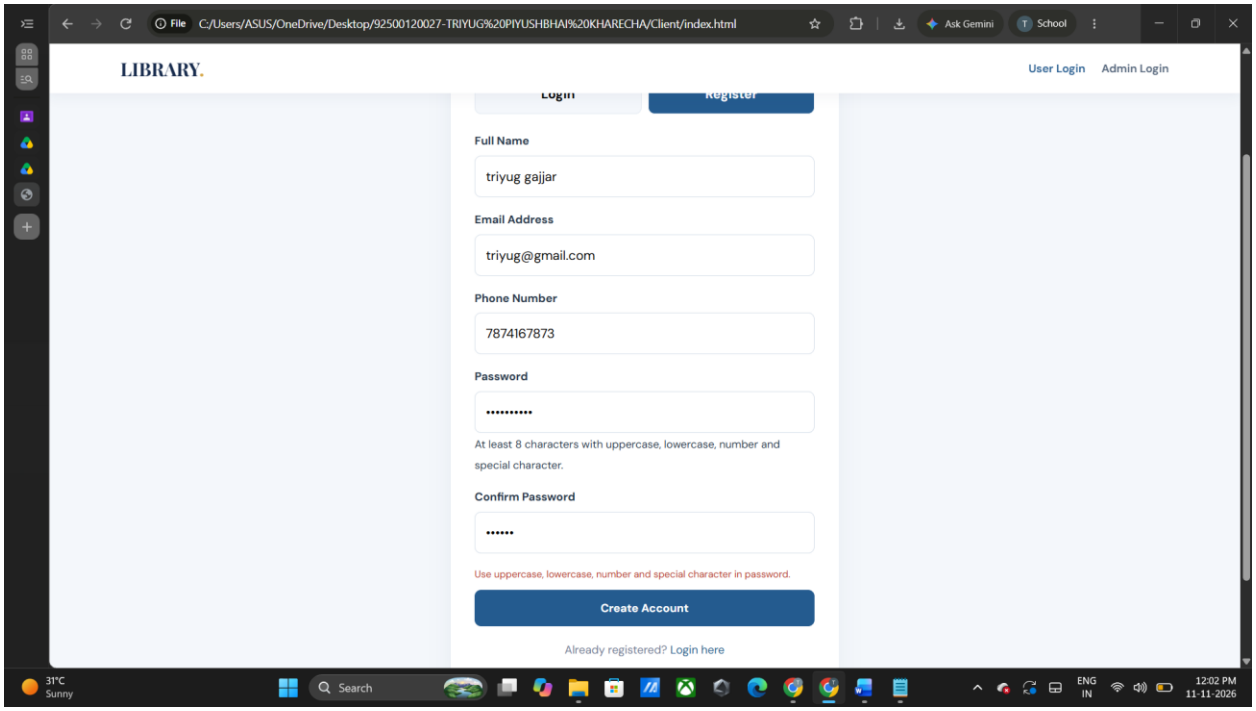

1 . REG. all field required

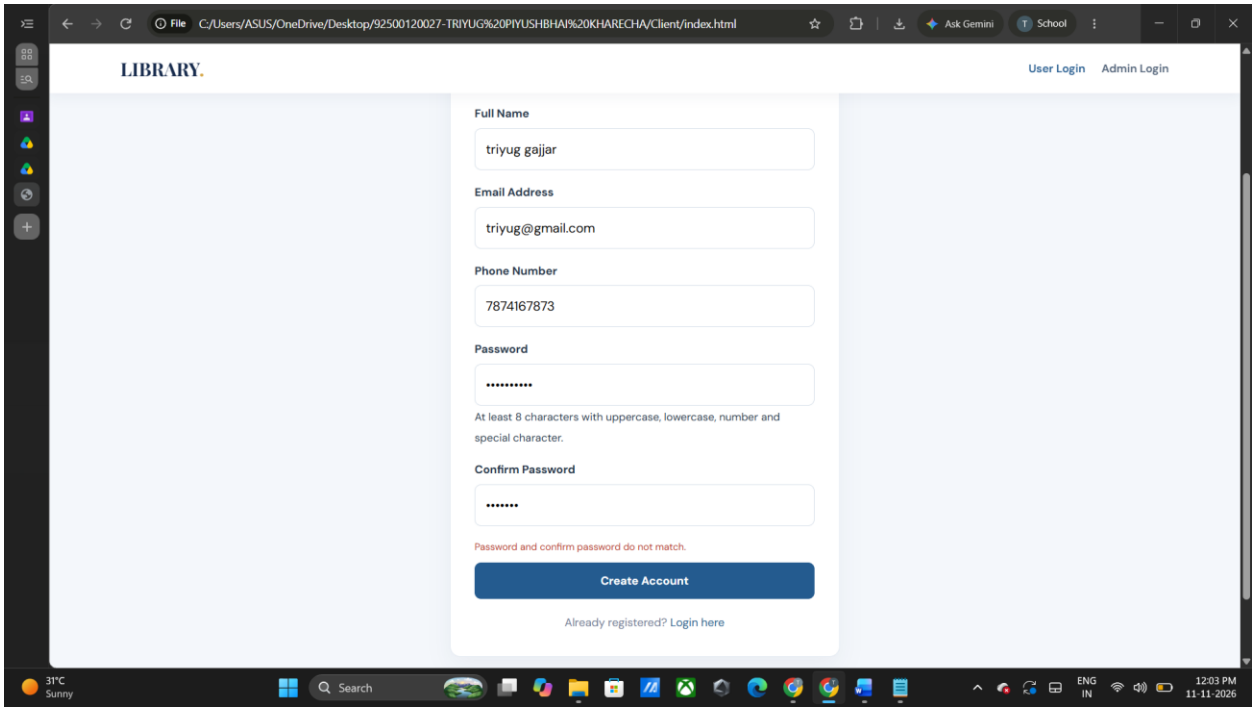

2. Reg. MAIL validation

3 . reg. mobile number validation

4 reg pass special characters validation

5. REG . PASS NOT MATCH WITH CONFIRM PASS VALIDATION

Source Code:

login-validation.js

```
document.addEventListener("DOMContentLoaded", function () {
  const form = document.getElementById("loginForm");
  if (!form) return;

  form.addEventListener("submit", function (event) {
    event.preventDefault();
    const email = document.getElementById("loginEmail").value.trim();
    const password = document.getElementById("loginPassword").value;
    const message = document.getElementById("loginMessage");
    message.textContent = "";

    if (!email || !password) {
      message.textContent = "All fields are required.";
      return;
    }

    const emailPattern = /^[^\s@]+@[^\s@]+\.[^\s@]{2,}$/;
```

```
    if (!emailPattern.test(email)) {
      message.textContent = "Please enter a valid email address.";
      return;
    }

    if (password.length < 8) {
      message.textContent = "Password must contain at least 8 characters.";
      return;
    }

    const users = JSON.parse(localStorage.getItem("libraryUsers")) || [];
    const user = users.find(item => item.email.toLowerCase() === email.toLowerCase() &&
item.password === password);
    if (!user) {
      message.textContent = "Invalid email or password. Please register first.";
      return;
    }

    localStorage.setItem("loggedInUser", JSON.stringify(user));
    window.location.href = "dashboard.html";
  });
});
```

Registration-validation.js

```
document.addEventListener("DOMContentLoaded", function () {
  const form = document.getElementById("registerForm");
  if (!form) return;

  form.addEventListener("submit", function (event) {
    event.preventDefault();
    const name = document.getElementById("registerName").value.trim();
    const email = document.getElementById("registerEmail").value.trim();
    const phone = document.getElementById("registerPhone").value.trim();
    const password = document.getElementById("registerPassword").value;
